

SYSTEMS AND METHODS FOR MULTI-ACCESS POINT
TRANSMISSION OF DATA USING A PLURALITY OF ACCESS POINTS
ABSTRACT OF THE INVENTION

Methods and systems for multi-access point transmission of data using a plurality of access points are disclosed. Methods include identifying a plurality of access points to be used cooperatively in combination with each other for the transmission of data to a receiver. The transmission of the data to the receiver via the plurality of access points is enabled utilizing at least one multi-access point transmission scheme.
